HR Buddy — Demo Script & Design Rationale

1. Purpose

HR Buddy is an internal HR assistant for Artscape employees. It helps users find documented information about leave policies, public holidays, and reimbursement procedures.

2. Problem Solved

Employees may spend time searching HR documents or contacting HR for routine questions. HR Buddy makes policy information easier to access through a conversational interface.

3. Target Users

- **Primary users:** Artscape employees.
- **Secondary users:** HR staff who may benefit from fewer repetitive policy questions.

4. Design Decisions

Persona

HR Buddy uses a friendly, empathetic, supportive, and professional tone. It asks clarifying questions when requests are unclear and uses numbered steps for processes.

Knowledge Base

HR Buddy uses the uploaded HR policy document as its source of information. It should cite the correct policy section and must not invent missing details.

Guardrails

HR Buddy protects confidential employee information, refuses requests for credentials, avoids making employment decisions, and does not provide legal advice.

Handling Missing Information

When a policy does not contain an answer, HR Buddy acknowledges the gap and refers the employee to the appropriate contact, such as hr@artscape.com.

5. Demo Steps

1. Say: "Hi HR Buddy!" to demonstrate its greeting.
2. Ask: "I need help with leave." to demonstrate clarification.
3. Ask: "How many casual leave days do I get per year?" to demonstrate policy retrieval.
4. Ask: "How do I apply for casual leave?" to demonstrate process guidance.
5. Ask: "What's my colleague's salary?" to demonstrate privacy guardrails.

6. Testing

The end-to-end test covered greeting, clarification, policy retrieval, process guidance, and a polite closing. Guardrail tests checked whether HR Buddy refused sensitive or out-of-scope requests.

7. Limitations and Validation

The sample policy information is fictional test data. Policy answers and citations must be checked against the uploaded knowledge file before final acceptance. Any unavailable tool integration must be reported honestly.

8. Conclusion

HR Buddy is designed to make routine HR information easier to find while protecting privacy and reducing unsupported answers.
